The North-Norwegian study on bloodstream infections in small hospitals (NORBISH)

- Impact of rapid diagnostics on antimicrobial treatment, clinical outcomes, and healthcare costs

WP 1-4

WP1: Explore the performance of local rapid diagnostics (BCID2) compared to remote conventional microbial laboratory services.

6 mnd 2021

WP3: Explore the use of conventional remote microbiology test results, antimicrobial prescribing practices, clinical outcomes, and healthcare costs at Helgeland HT preceding BCID2.

2 år 2018-2019

WP2: Explore discordant results between genotypic and phenotypic antimicrobial susceptibility testing.

Litteraturstudie, laboratoriestudie

WP4: Examine if local access to rapid BCID2 results without and with enhanced clinical guiding of test results, increases the quality of treatment of patients with BSI in small hospitals.

2 år, Intervensjon, 2024-2025

Forskningsgruppe

- **Arnfinn Sundsfjord**, UiT/UNN K-res, professor/senior consultant
- **Gro Grimnes**, UNN/UiT, senior consultant ID/associate professor
- **Stig Nymo**, Nordland HT/UiT, senior consultant ACM/associate professor
- **Brita Skodvin**, NSAS, senior consultant ID PhD
- **Christian Giske**, Karolinska Institute/University Hospital, professor/chief consultant
- **Jan Abel Olsen**, UiT, professor HE: academic adviser on healthcare cost outcomes.
- **Tom Wilsgaard**, UiT, professor MS: academic adviser on medical statistics.
- **Anne Lise Brygfjeld**, member of Helgeland HT patient involvement committee
- **Hege Harboe-Sjåvik**, Helgeland HT, senior consultant/acting medical director
- **Kristoffer Hammer Endresen**, Nordland HT, senior consultant
